

Empowering India: Analysing the Evolution of Union Budget Allocations for Sustainable Growth in this topic define problem statement

Problem Statement

India's Union Budget plays a pivotal role in shaping the nation's economic direction, social development, and long-term sustainability. Over the years, budget allocations have increasingly emphasized sustainable growth—balancing economic expansion with social inclusion and environmental responsibility. However, despite this shift, there is limited systematic analysis of how Union Budget allocations have evolved across key sectors such as infrastructure, healthcare, education, renewable energy, agriculture, and social welfare, and to what extent these changes align with sustainable development objectives.

This study seeks to address this gap by analyzing historical trends in Union Budget allocations, identifying patterns and priorities, and evaluating whether financial commitments effectively support sustainable and inclusive growth. The problem lies in understanding whether budgetary changes are consistent, adequate, and outcome-oriented, and how they contribute to empowering India's economy and society in the long run.

In essence, the research aims to determine how the evolution of Union Budget allocations reflects India's sustainable growth ambitions and to what extent these allocations translate into measurable developmental outcomes.
